

Our environment is our number one asset, and we must treat it that way! Our city is here because of the water, not the other way around, and once the water quality drops, so will the population and our quality of life. The fish kills, no swims, and rampant littering is unacceptable for our community, and we must do better. Investment in sewer repair and storm-water repair is key to our survival and moving forward. We need more trash cans everywhere, and we should enforce our liter laws. We must also promote alternative modes of transportation such as mass transit and micro-mobility. The easier it is, the more people will use it. Let's start with the basics if you ask me! Small, simple things add up to a clean and resilient community and environment.

- Sewer Repair/Upgrade
- Storm Water Repair/Upgrade (Nutrient/Pollution Filtration)
- Upgrade and Improve All Recycling Efforts
- "Trash cans on every corner"
- Protected Bike Lane, Secure Bike Parking, Increased Penalties for Bike Theft
- Quick Response Cleaning Program- 24/7 Clean Crew
- REGULAR Cleaning: All Sidewalks, Bus Stops Park Benches, and More. Let's make this city shine!
- Finally, add some to my list!! There is lots of blank paper in our campaign for resident ideas and input!
